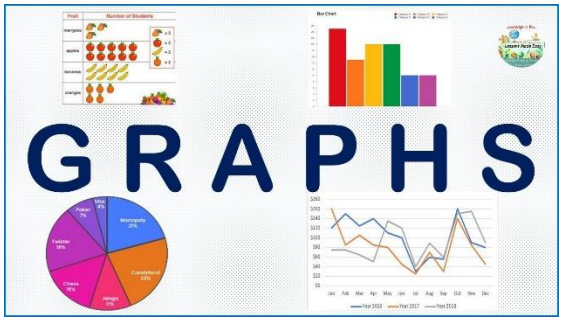
Year 6 Newsletter

April 2026

Welcome back! We are only just back but already more than half way through the month and so we have to get busy straight away!

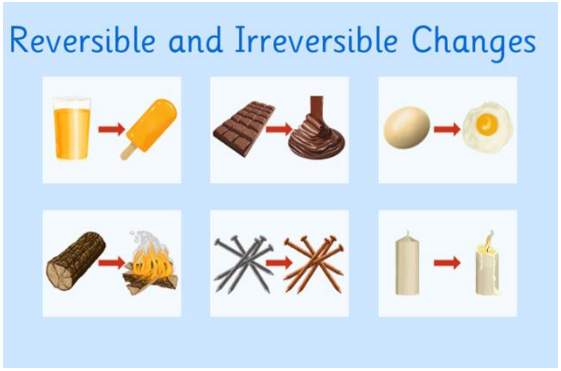
In English we will start off the term with a unit test. Then we will read and learn about rainforests; what they are like, what plants grow there, how they help us, how they are being destroyed and how we can help to preserve them. We will remind ourselves of the features of a non-fiction text, and how to use the information we learn to form opinions about matters.

In Maths the next topic will be: mean, mode, median and range.



We will then move on to graphs and charts – interpreting them and constructing them.

In Science we are learning about reversible and irreversible changes.



We will revise states of matter and the water cycle.

In our Geography lessons we will learn about the various means of transport, and the advantages and disadvantages of each. We will investigate how each affects the environment and what we can do to limit pollution.

As always, if you have any questions or concerns, please feel free to contact Ms Omeash and make an appointment.
