Year 6 Newsletter

February 2026

We have had an unusual start to the year, which has spoiled our plans but hopefully from now on we will be able to continue our routine.

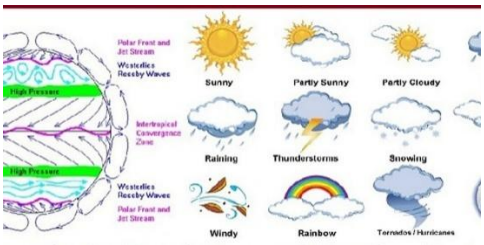
When we have completed the unit test, we will start a new unit in English and look at plays again. These will have aliens and outer space in common.

We will revisit tenses and the features of a play. We will also be making an effort to improve our writing, which includes spelling, syntax, and vocabulary. The best way to help a child improve in English is to READ!

In Maths we will continue revising. We will move on to multiplying fractions, decimals, money and then long multiplication. After that we will be working with 2-D shapes and angles and eventually learn how to draw circles using a compass. Please note that every child should have their own compass to work with, as well as a ruler, rubber, protractor and pencils.

In Science we will continue to learn about 'Heart, Lungs and Circulation.' and then move onto reversible and irreversible changes.

In our Geography lessons we will continue to investigate climate. We will find out how it affects us, but also how we are affecting it.



We have started practising for the EDEXCEL exams in the summer term, and will continue throughout the term. Please make sure that you register your child for the exams as soon as possible.

As always, if you have any questions or concerns, please feel free to contact Ms Omeash and make an appointment. I will be arranging appointments this month and hope to see everyone very soon.
