Year 6 Newsletter

January 2026

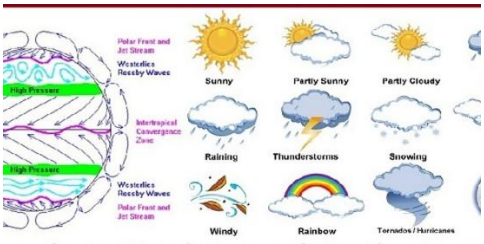
A new week, a new term, a new year, a new opportunity to do well. That's how we will start the year!

We will start a new unit in English and learn about the solar system. We will learn how to write instructions, and try to write persuasively.

In Maths we will continue what we have started and work with percentages. We will then move on to fractions and how to multiply and divide them. That will take us to the end of book 1, and then we'll start on Book 2. There will be lots of revision!

In Science we will learn about 'Heart, Lungs and Circulation'. We will find out how the heart works and see what happens when we exercise. How are the lungs and heart connected? We'll find out soon.

In our Geography lessons we will learn about the weather. We will find out how it affects us, but also how we are affecting it.



We are fast approaching the end of the year, and with it there will be exams. As many of you know, the Year Six children sit the external EDEXCEL exams in the summer term, and we will start practising this term. During the term we will be sitting old exam papers in exam situations so that it will all seem familiar to the children when they sit the 'proper' exams. There Is no need for panic! We have plenty of time to look at things we are unsure of and also to learn the things we haven't yet learnt.

Please make sure that your child has all the tools he/she needs for school. Scissors and glue are essential in the classroom, as well as pencils, rulers and rubbers.

As always, if you have any questions or concerns, please feel free to contact Ms Omeash and make an appointment.
